DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 05/01/2002 has been considered.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The abstract of the disclosure is objected to because it contains more than 150 words and includes phrases that can be implied, "The spinal fixation device of the present invention comprises," lines 4-5. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3731

5. Claims 54-78 are rejected under 35 U.S.C. 103(a) as being unpatentable over Michelson (5,015,247) in view of Jefferies (4,394,370), Ripamonti (5,769,895) and Urist (4,526,909). Michelson discloses an interbody spinal fusion implant including all the structure limitations as claimed (Figs. 4A-4B) wherein the spinal fusion implant including a hollow chamber containing a material for promoting bone ingrowth (col. 10, lines 3-14 and col. 11, line 3 to col. 12, line 11). Although, Michelson does not disclose the material for promoting bone ingrowth being a bone morphogenetic protein, bone morphogenetic protein is a known material for promoting bone growth at the time the present invention was made. Jefferies teaches a bone graft material including bone morphogenetic protein for inducing new bone formation (col. 2, line 1 to col. 6, line 49), Ripamonti teaches porous carrier disks composed of hydroxyapatite being used as the carrier for bone morphogenetic protein to a treatment site for inducing the formation of new bone at the treatment site (col. 7, lines 34-44) and Urist (4,526,909) teaches a bone implant comprising bone morphogenetic protein for inducing new bone formation (col. 1 to col. 6, line 26). Therefore, it would have been obvious matter of design choice to modify Michelson reference by having the interbody spinal fusion implant containing bone morphogenetic protein for promoting bone ingrowth within the implant, since the applicant has not disclosed that having the material for promoting bone ingrowth being bone morphogenetic protein solves any stated problem or is for any particular purpose and it appears that the interbody spinal fusion implant containing bone morphogenetic protein would perform equally well with the interbody spinal fusion

implant containing other materials that promote bone ingrowth, for example, autogenous bone.
